Geologic and physiographic setting of the ecosystem

The Piedmont region mostly consists of rolling hills with soils that are commonly a red color, formed from weathering of iron minerals in granite and other rocks.

PIEDMONT

Description:

- 2nd largest region making up 1/3 of the land
- Most populated region of Georgia
- Rolling hills & farmland
- Cotton production

Sphere to Sphere Interactions

List all the sphere-to-sphere interactions you can think of, and describe how energy and/or matter move between the spheres, and how they interact
